Electrical and Computer Engineering

The George R. Brown School of Engineering

Chair
Behnaam Aazhang

Professors
Behnaam Aazhang
Athanasios C. Antoulas
Richard G. Baraniuk
Joseph R. Cavallaro
John W. Clark, Jr.
Naomi J. Halas
Don H. Johnson
Erzsébet Merényi
Michael Orchard
Frank K. Tittel
William L. Wilson, Jr.
James F. Young

Professors Emeriti
J. Robert Jump
James Boyd Pearson, Jr.
Thomas A. Rabson

Associate Professors
Edward W. Knightly
Daniel Mittleman
Peter J. Varman

Assistant Professors
Kevin Kelly
Junichiro Kono
Yehia Massoud
Kartik Mohanram
Vijay Pai

Faculty Fellows
Hyeokho Choi
Ashutosh Sabharwal

Adjunct Faculty
Richard Barton
Akhill Bidani
John Byrne
Scott Cutler
Anand Dabak
Wayne Giles
Thomas Harman
Dirar Khoury
Jorma Lilleberg
Richard P. Massey
Robert Nowak
Steve Sheafor
Markus Sigrist
Michael Smayling
Thanh Tran

Lecturers
Katherine Fletcher
Osama Mawlawi
James B. Sinclair
James D. Wise

Degrees Offered: BA, BSEE, MEE, MS, PhD

The electrical and computer engineering department strives to provide high quality degree programs that emphasize fundamental principles, respond to the changing demands and opportunities of technology, challenge the exceptional abilities of Rice students, and prepare these students for roles of leadership in their chosen careers.

In support of this goal, the electrical and computer engineering department’s objectives are to provide its undergraduate students with:

- A solid foundation in the fundamentals of electrical and computer engineering, mathematics, and science, enabling them to adapt easily to technological developments that will occur during their careers
- An in-depth exposure to one area of electrical and computer engineering, emphasizing its relationship to the basic framework of the discipline and to other appropriate topics outside that framework
- Courses and projects that actively involve them in their own education and enhance their ability to formulate and solve real-world design and research problems
A broad education outside of engineering and science that emphasizes the role of electrical and computer engineering in society and builds the leadership skills necessary to deal with the increasing impact of technology.

Graduate and undergraduate programs in electrical and computer engineering offer concentrations in areas that include system and control theory, bioengineering, communications, quantum electronics and lasers, computer systems, and electronic materials, devices, and circuits. Bioengineering is primarily a graduate program, although undergraduates may take introductory courses in this field as electives or as part of their specialization area courses.

**Undergraduate Program**—The department offers two undergraduate degrees, the Bachelor of Arts (BA) and the Bachelor of Science in Electrical Engineering (BSEE). The BA program is highly flexible, permitting a student to tailor the program to his or her interests, be they broad or highly focused. The BSEE degree is approved by the Accreditation Board for Engineering and Technology (ABET); requires more scientific and professional courses, for a total of at least 134 semester hours; and has fewer electives. Outstanding students interested in careers in research and teaching may enter graduate school after either bachelor degree. Both degrees are organized around a core of required courses and a selection of elective courses from five specialization areas. Each student’s program must contain a depth sequence in one area and courses from at least two areas to provide breadth. The specialization electives provide a flexibility that can be used to create a focus, such as optical communications, that crosses traditional areas. Because of the number of options, students should consult early with departmental advisers to plan a program that meets their needs.

The BA degree provides a basic foundation in electrical and computer engineering that the student can build upon to construct a custom program. Because of its flexibility and large number of free electives, the BA can be combined easily with another major to create an interdisciplinary program. This may be particularly appropriate for students planning further study in law, business, or medicine.

The BSEE is the usual degree taken by those students planning a career of engineering practice. It is accredited by ABET and can reduce the time required to become a licensed professional engineer. Accreditation and professional licensing are important for some careers, and many states require licensure for those providing engineering services directly to the public, for example, as a consultant. The program for the BSEE degree requires greater depth than the BA degree but still provides considerable flexibility. Students who place out of required courses but who do not have credit must substitute other approved courses in the same area.

The requirements for the two degrees are grouped into four categories, listed below. The specific courses required for each degree are listed in the section for that degree.

**Basic Mathematics and Science Courses**

- MATH 101 *Single Variable Calculus I*
- MATH 102 *Single Variable Calculus II*
- CAAM 335 *Matrix Analysis* or MATH 355 *Linear Algebra*
- MATH 212 *Multivariable Calculus*
- PHYS 101 *Mechanics*
- PHYS 102 *Electricity and Magnetism*
- CHEM 121 *General Chemistry*

**Core Courses**

- ELEC 220 *Fundamentals of Computer Engineering*
- ELEC 241 *Fundamentals of Electrical Engineering I*
- ELEC 242 *Fundamentals of Electrical Engineering II*
- ELEC 261 *Introduction to Waves and Photonics*
- ELEC 301 *Introduction to Signals*
- ELEC 305 *Introduction to Physical Electronics*
- ELEC 326 *Digital Logic Design*
- ELEC 391 *Professional Issues in Electrical Engineering*
- ELEC 331 *Applied Probability*
Restricted Electives

One from Computation

CAAM 210 Introduction to Engineering Computation
CAAM 211 Introduction to Engineering Computation
COMP 210 Introduction to Principles of Scientific Computation (COMP 210 is a prerequisite for many other computer courses.)

One from Laboratory

ELEC 201 Introduction to Engineering Design
ELEC 303 Systems Laboratory
ELEC 327 Digital Logic Design Laboratory
ELEC 423 VLSI Design II
ELEC 433 Communications Systems Lab
ELEC 465 Physical Electronics Lab
ELEC 490 Electrical Engineering Projects

Specialization Areas—The following groups of courses focus on specific areas within electrical and computer engineering. The systems area involves the study of processing and communicating signals and information through systems of devices, control and robotics, signal and image processing, and communications. The computer engineering area provides a broad background in computer systems engineering, including computer architecture, hardware engineering, software engineering, and computer systems performance analysis. The physical electronics area encompasses studies of electronic materials, semiconductor and optoelectronic devices, lasers, and photonics.

Computer Engineering

COMP 212 Intermediate Programming
COMP 311 Programming Languages
ELEC 322 Applied Algorithms and Data Structures
ELEC 421 Operating Systems and Concurrent Programs
COMP 410 Software Construction Methodology
COMP 413 Distributed Program Construction
COMP 422 Parallel Computing
ELEC 422 VLSI Design
ELEC 424 Computer Systems Design
ELEC 425 Computer Systems Architecture
ELEC 426 Digital Systems Design
ELEC 428 Computer Systems Performance
ELEC 429 Introduction to Computer Networks

Electronic Circuits and Devices

ELEC 342 Electronic Circuits
ELEC 427 Pulse and Digital Circuits
ELEC 435 Electromechanical Devices and Systems
ELEC 442 Advanced Electronic Circuits
ELEC 443 Power Electronic Circuits
ELEC 462 Semiconductor Devices

Quantum Electronics

PHYS 202 Quantum Mechanics
ELEC 306 Electromagnetic Fields and Devices
ELEC 361 Electronic Materials and Quantum Devices
ELEC 462 Semiconductor Devices
ELEC 463 Lasers and Photonics
ELEC 465 Physical Electronics Practicum
ELEC 561 Semiconductor Manufacturing
ELEC 563 Introduction to Solid-State Physics

Bioengineering

ELEC 481 Computational Neuroscience
ELEC 482 Physiological Control Systems
ELEC 483 Introduction to Biomedical Instrumentation and Measurement Techniques

Systems: Control, Communications, and Signal Processing

ELEC 301 Introduction to Signals

The department may add or delete courses from these lists from time to time. At least one of the specialization courses must be an approved design course. In addition, graduate courses and equivalent courses from other departments may be used to
satisfy area requirements with permission; consult with departmental advisers for the latest information. A course can satisfy only one program requirement. ELEC 491/492 may be used to satisfy requirements in any area, depending on the nature of the project.

**Degree Requirements for BA in Electrical and Computer Engineering**

For general university requirements, see Graduation Requirements (pages 14–15). Students completing the BA program must have a total of at least 120 semester hours at graduation.

**Basic Mathematics and Science**—Students in the BA program must take all of the courses listed above under basic mathematics and science courses, with the following exceptions: CHEM 121 is not required, and MATH 355 *Linear Algebra*, MATH 381 *Introduction to Partial Differential Equations*, or CAAM 353 *Computational Numerical Analysis* may be taken instead of ELEC 331.

**Core Courses**—All of the courses listed above under core courses are required for the BA degree, except for COMP 212, ELEC 301, and ELEC 391. Students also have the following options: CAAM 353 *Computational Numerical Analysis* may be taken instead of MATH 212, and CHEM 121 *General Chemistry* may be taken instead of PHYS 201.

**Restricted Electives**—Students must take 1 computation course and 1 laboratory course listed above.

**Specialization Areas**—Students must take 2-course sequence in 1 area and courses from at least 2 areas listed above.

**Degree Requirements for BS in Electrical Engineering**

For general university requirements, see Graduation Requirements (pages 14–15). Students completing the BSEE program must have a total of at least 134 semester hours to graduate.

**Basic Mathematics and Science**—Students must take all of the courses listed above under basic mathematics and science courses. They must also take additional math and science courses, approved by the department, to bring their total to 32 hours.

**Core Courses**—Students must take all of the courses listed above under core courses.

**Restricted Electives**—Students must take 1 computation course and 1 laboratory course listed above.

**Specialization Areas**—Students in the BSEE program choose courses from 2 or more specialization areas listed above. Students must take at least 7 specialization courses, including at least 4 courses in one area and courses from at least 2 different areas. Because of the number of options, students should consult early with department advisers to plan a program that meets their needs. Students going on to a technical career or graduate school may need to use unrestricted electives to create a coherent program.

**Design Component**—At least 1 of the specialization area courses must be an approved design course.

**Degree Requirements for MEE, MS, and PhD in Electrical and Computer Engineering**

For general university requirements, see Graduate Degrees (pages 57–58). Students should also consult department advisers for specific courses of study.
**Master's Degree Programs**—A candidate for the professional MEE degree must complete an approved sequence of 10 advanced courses, totaling at least 30 hours. At least 4 of these must be technical courses at the 500 level or higher. At least 7 of the courses must be technical courses at the 400 level or higher. All 10 courses must be at the 300 level or higher and 2 credit hours or more. Specialization is possible in the general areas of bioengineering, signal processing, communication and control theory, electro-optics and physical electronics, and computer science and engineering.

The MS degree is not a terminal degree but part of the PhD program. A candidate for the MS degree must complete both an approved course of study and an approved research program, culminating in an acceptable thesis.

A joint MBA/Master of Engineering degree is also available in conjunction with the Jesse H. Jones Graduate School of Management.

**PhD Program**—Candidates should expect to spend a minimum of three academic years of graduate study in this program. Normally, candidates complete the requirements for an MS degree as part of the PhD program. For the PhD, students must:

- Obtain high standing in an approved course program
- Perform satisfactorily on qualifying examinations
- Complete a satisfactory dissertation of independent and creative research
- Pass a final oral examination

*See ELEC in the Courses of Instruction section.*
