The development and use of natural gas as a clean fuel—including in cars—will be the major focus of the second annual U.S.-China Oil and Gas Industry Forum set for July 21-22 at Rice's James A. Baker III Institute for Public Policy.

Panel discussions among government and industry representatives from the United States and China will start at 8:30 a.m. on Wednesday, July 21, in James A. Baker III Hall at Rice. A complete Forum agenda is provided at the end of this release. A campus map is available by contacting the Rice Office of Media Relations at (713) 831-4795.

Journalists assigned to cover the Forum will need to secure press credentials at the media sign-in table at Baker Hall prior to the start of the program. The media badge must be worn while in Baker Hall.

Senior U.S. representatives to the Forum will include the Office of the Vice President, the U.S. Department of Energy, the U.S. Department of Commerce, and the U.S. Department of State. More than 50 U.S. oil and gas industry executives are also expected to attend. China's State Development Planning Commission will lead China's delegation along with China's consul general.

Approximately 120 government and industry representatives from both the United States and China participated in the first Forum held last November in Beijing.

"The Baker Institute is pleased to host this forum, especially in light of the Institute's recently published study on 'China and Long-Range Asian Energy Security—An Analysis of the Political, Economic and Technological Factors Shaping Asian Energy Markets,'" said Edward Djerejian, director of the Baker Institute. Djerejian will moderate the forum's first panel discussion.

"China's energy sector is one of the key areas in which dramatic change can be expected in the coming years as China emerges as a global power in the 21st century," he added. "The cooperation between the United States and China in the energy field will be a key factor in how China meets its energy and environmental needs. This conference can play an important role in this overall effort," he added.

The U.S. government is committed to strengthening bilateral cooperation with China, and it views the Oil and Gas Industry Forum as an important vehicle for achieving the energy and environmental goals of both nations.
