Electrical and Computer Engineering

The George R. Brown School of Engineering

**Chair**
J. Robert Jump

**Professors**
Behnaam Aazhang
Athanasios C. Antoulas
C. Sidney Burrus
John W. Clark, Jr.
Naomi J. Halas
Don H. Johnson
James Boyd Pearson, Jr.
Thomas Avelyn Rabson
Frank K. Tittel
William L. Wilson, Jr.
James F. Young

**Associate Professors**
Sarita V. Adve
Richard G. Baraniuk
John K. Bennett
Joseph R. Cavallaro
Peter J. Varman

**Assistant Professor**
Edward W. Knightly

**Faculty Fellows**
Elza Erkip

**Adjunct Professors**
Daniel Mittleman
Aria Nostratinia
Akbil Bidani
Zsort Bor
John H. Byrne
Wayne R. Giles
Thomas Harman
Dirar Khoury
T. Randall Lee
Gerd Marowsky
Arthur Sherwood
Markus Sigrist
Michael C. Smayling
Chiyeko Tsuchitani

**Lecturers**
Hardy M. Bourland
Joel H. Cyprus
Richard P. Massey
James B. Sinclair
James D. Wise

**Degrees Offered:** B.A., B.S.E.E., M.E.E., M.S., Ph.D.

Graduate and undergraduate programs in electrical and computer engineering offer concentrations in areas that include system and control theory, bioengineering, communications, quantum electronics and lasers, computer systems, and electronic materials, devices, and circuits. Bioengineering is primarily a graduate program, although undergraduates may take introductory courses in this field as electives or as part of their specialization area courses.

**Undergraduate Program.** The department offers two undergraduate degrees, the Bachelor of Arts (B.A.) and the Bachelor of Science in Electrical Engineering (B.S.E.E.). The B.A. program is highly flexible, permitting a student to tailor the program to his or her interests, be they broad or highly focused. The B.S.E.E. degree is approved by the Accreditation Board for Engineering and Technology (ABET); requires more scientific and professional courses, for a total of at least 134 semester hours; and has fewer electives. Outstanding students interested in careers in research and teaching may enter graduate school after either bachelor degree. Both degrees are organized around a core of required courses and a selection of elective courses from five specialization areas. Each student’s program must contain a depth sequence in one area and courses from at least two areas to provide breadth. The specialization electives provide a flexibility that can be used to create a focus, such as optical communications, that crosses traditional areas. Because of the number of options, students should consult early with departmental advisers to plan a program that meets their needs.
The B.A. degree provides a basic foundation in electrical and computer engineering that the student can build upon to construct a custom program. Because of its flexibility and large number of free electives, the B.A. can be combined easily with another major to create an interdisciplinary program. This may be particularly appropriate for students planning further study in law, business, or medicine.

The B.S.E.E. is the usual degree taken by those students planning a career of engineering practice. It is accredited by ABET and can reduce the time required to become a licensed professional engineer. Accreditation and professional licensing are important for some careers, and many states require licensure for those providing engineering services directly to the public, for example, as a consultant. The program for the B.S.E.E. degree requires greater depth than the B.A. degree but still provides considerable flexibility. Students who place out of required courses but who do not have credit must substitute other approved courses in the same area.

The requirements for the two degrees are grouped into four categories, listed below. The specific courses required for each degree are listed in the section for that degree.

### Basic Mathematics and Science Courses
- MATH 101 Single Variable Calculus I
- MATH 102 Single Variable Calculus II
- MATH 211 Ordinary Differential Equations and Linear Algebra
- MATH 212 Multivariable Calculus
- PHYS 101 Mechanics
- PHYS 102 Electricity and Magnetism
- CHEM 121 General Chemistry
- ELEC 331 Applied Probability

### Core Courses
- ELEC 241 Fundamentals of Electrical Engineering I
- ELEC 242 Fundamentals of Electrical Engineering II
- ELEC 301 Introduction to Signals or COMP 212 Intermediate Programming
- ELEC 305 Introduction to Physical Electronics
- ELEC 320 Introduction to Computer Organization
- ELEC 326 Digital Logic Design
- ELEC 391 Professional Issues in Electrical Engineering
- PHYS 201 Waves and Optics

### Restricted Electives

#### Computation
- CAAM 210 Introduction to Engineering Computation
- CAAM 211 Introduction to Engineering Computation
- COMP 210 Introduction to Principles of Scientific Computation (COMP 210 is a prerequisite for many other computer courses.)

#### Laboratory
- ELEC 201 Introduction to Engineering Design
- ELEC 303 Systems Laboratory
- ELEC 327 Digital Logic Design Laboratory
- ELEC 423 VLSI Design II
- ELEC 433 Communications Systems Lab
- ELEC 465 Physical Electronics Lab
- ELEC 490 Electrical Engineering Projects
Specialization Areas. The following groups of courses focus on specific areas within electrical and computer engineering. The systems area involves the study of processing and communicating signals and information through systems of devices, control and robotics, signal and image processing, and communications. The computer engineering area provides a broad background in computer systems engineering, including computer architecture, hardware engineering, software engineering, and computer systems performance analysis. The physical electronics area encompasses studies of electronic materials, semiconductor and optoelectronic devices, lasers, and photonics.

Bioengineering
ELEC 481 Computational Neuroscience
ELEC 482 Physiological Control Systems
ELEC 483 Introduction to Biomedical Instrumentation and Measurement Techniques

Computer Engineering
COMP 212 Intermediate Programming
ELEC 322 Applied Algorithms and Data Structures
ELEC 421 Operating Systems and Concurrent Programs
ELEC 422 VLSI Design
ELEC 424 Computer Systems Design
ELEC 425 Computer Systems Architecture
ELEC 426 Digital Systems Design
ELEC 428 Computer Systems Performance
ELEC 429 Introduction to Computer Networks

Electronic Circuits and Devices
ELEC 302 Introduction to Systems
ELEC 430 Communication Theory and Systems
ELEC 431 Digital Signal Processing
ELEC 436 Control Systems I

ELEC 427 Pulse and Digital Circuits
ELEC 435 Electromechanical Devices and Systems
ELEC 442 Advanced Electronic Circuits
ELEC 443 Power Electronic Circuits
ELEC 462 Semiconductor Devices

Quantum Electronics
ELEC 306 Electromagnetic Fields and Devices
PHYS 202 Quantum Mechanics
ELEC 361 Electronic Materials and Quantum Devices

ELEC 462 Semiconductor Devices
ELEC 463 Lasers and Photonics
ELEC 465 Physical Electronics Practicum

ELEC 563 Introduction to Solid-State Physics

Degree Requirements for B.S. in Electrical Engineering

For general university requirements, see Graduation Requirements (pages 17–19). Students completing the B.S.E.E. program must have a total of at least 134 semester hours in order to graduate.

Basic Mathematics and Science. Students must take all of the courses listed under Basic Mathematics and Science Courses. They must also take additional math and science courses, approved by the department, to bring their total to 32 hours.

Core Courses. Students must take all of the courses listed under Core Courses, except that they need take only one of ELEC 301 and COMP 212.

Restricted Electives. 1 Computation Course and 1 Laboratory Course.

Specialization Areas. Students in the B.S.E.E. program choose courses from 2 or
more specialization areas. Students must take at least 7 specialization courses, including at least 4 courses in one area and courses from at least 2 different areas. Students taking either ELEC 301 or COMP 212 to satisfy a core course requirement may not use that course to satisfy a specialization area requirement. Because of the number of options, students should consult early with department advisers to plan a program that meets their needs. Students going on to a technical career or graduate school may need to use unrestricted electives to create a coherent program.

Design Component. At least 1 of the specialization area courses must be an approved design course.

Degree Requirements for B.A. in Electrical and Computer Engineering

For general university requirements, see Graduation Requirements (pages 17–19). Students completing the B.A. program must have a total of at least 120 semester hours at graduation.

Basic Mathematics and Science. Students in the B.A. program must take all of the courses listed under Basic Mathematics and Science Courses, with the following exceptions: CHEM 121 is not required, and MATH 355 Linear Algebra, MATH 381 Introduction to Partial Differential Equations, or CAAM 353 Computational Numerical Analysis may be taken instead of ELEC 331.

Core Courses. All of the courses listed under Core Courses are required for the B.A. degree, except for COMP 212, ELEC 301, and ELEC 391. Students also have the following options: CAAM 353 Computational Numerical Analysis may be taken instead of MATH 212, and CHEM 121 General Chemistry may be taken instead of PHYS 201.

Restricted Electives. 1 Computation Course and 1 Laboratory Course.

Specialization Areas. A 2-course sequence in 1 area and courses from at least 2 areas.

Degree Requirements for M.E.E., M.S., and Ph.D. in Electrical and Computer Engineering

For general university requirements, see Graduate Degrees (pages 72–73). Students should also consult department advisers for specific courses of study.

Master’s Degree Programs. A candidate for the professional M.E.E. degree must complete an approved sequence of 10 advanced courses, totaling at least 30 hours. At least 4 of these must be technical courses at the 500 level or higher. At least 7 of the courses must be technical courses at the 400 level or higher. All 10 courses must be at the 300 level or higher and 2 credit hours or more. Specialization is possible in the general areas of bioengineering, signal processing, communication and control theory, electro-optics and physical electronics, and computer science and engineering. A candidate for the M.S. degree must complete both an approved course of study and an approved research program, culminating in an acceptable thesis. (The M.S. degree is not a terminal degree but part of the Ph.D. program.)

A joint M.B.A./Master of Engineering degree is also available in conjunction with the Jesse H. Jones Graduate School of Management.

Ph.D. Program. Candidates should expect to spend a minimum of three academic years of graduate study in this program. Normally, candidates complete the requirements for an M.S. degree as part of the Ph.D. program. For the Ph.D., students must:

- Obtain high standing in an approved course program
- Perform satisfactorily on qualifying examinations
- Complete a satisfactory dissertation of independent and creative research
- Pass a final oral examination

See ELEC (pages 312–320) in the Courses of Instruction section.
